* Overall, it was a good experience. Really benefited from the class especially the SAP platform.

Appreciated the importance of collaboration.

* I really enjoyed this class. Especially I learned a lot about SAP IBP concept, uncertainty about ERP implementation

* SAP ERP part was the most interesting to me. Very close to market

* Great learning experience

*S&OP was always a Black Box. I learnt a lot

* More real life examples will be great!

* It's very relevant & great insight about S&OP

* Overall, the S&OP course is very relevant to our real world. We learn a lot of new knowledge & technique.

Thanks a lot!

* Would prefer full day program rather than evening class.

* One of the best course!

* Learn many new prospectives. Course materials is excellent.

* Pace was a little slow. A lot was repeated.

* Of all the classes I had, this is by far my favourite. A lot of "nodding" agreeing moments with this lecturer.

It gave me confident on the progress we are implementing in my workplace. I'm glad we are in line.

* Very interesting course, I learned a great deal. The course should be slightly longer & more cases.

* Excellent credential of lecturer bringing very relevant work experience

* Enjoyed the class very much. He brought everything we learned all together. The thing I got out of it is to be practical on the methodologies used to help solve business problems. Key is leadership & change management.

* I enjoyed the course but I would have liked to received the materials in advance to practice & contribute more in the class. Overall the course

* Course could be improved by running practical exercises, making groups of students the different members of S&OP processes.
